Responsible for overseeing the regional critical asset cyber security compliance program to the NERC Critical Infrastructure Protection standards.

A DIVISION OF SADINSKY & PARTNERS INTL, LLC

This is the nation's largest independent power generation portfolio of fossil fuel, nuclear, solar and wind facilities. A Fortune 250 company, this organization creates value through reliable and efficient conventional generation while driving innovation in solar and renewable power, electric vehicle ecosystems, carbon capture technology and customer-centric energy solutions. In addition to 47,000 megawatts of generation capacity, enough to supply nearly 40 million homes, their retail electricity providers serve more than three million customers.

Responsible for overseeing the regional critical asset cyber security compliance program to the NERC Critical Infrastructure Protection standards.

Educational Requirements: Bachelor's degree with a concentration in computer science, engineering, management information systems or related field or equivalent experience, or 8-10 years of experience in Information Technology industry.

- 0 At least 5 years' experience in an industrial controls environment (power plant/energy, manufacturing, utility, or equivalent) with working knowledge of SCADA/DCS systems and related hardware and software.
- 0 Experience in managing various groups and work streams in a matrix type setting to meet program objectives.

Primary responsibilities include:

- 0 Oversee, manage and direct activities of the designated site CIP specialists in the region to meet NERC CIP program requirements.
- 0 Ensure execution, tracking and review of all site specific controls for meeting regional requirements in accordance with NERC CIP program requirements for new sites in region or change in regulations.
- 0 Develop work scope, design of Cyber Security configuration around systems, implementation and training at site, benchmarking and commissioning
- 0 Serve as primary SME on site specific hardware, software and control architectures
- 0 Perform required incident response, recovery and backup tests with designated site CIP specialists. Provide detailed analysis, diagnosis, and testing with site CIP specialists.
- 0 Coordinate work with supporting groups to maintain compliance of asset
- 0 Assist each site specialist in development, implementation and execution of remediation efforts for mitigation activities and securing the site infrastructure from threats.
- 0 Implement information protection procedures and ensure compliance to information protection standards
- 0 Monitor and analyze DCS, EMS and server activity logs to detect any potential breaches at all sites in the region
- 0 Provide technical guidance and serve as first responders with facility personnel and CIP specialists in the event of a breach and provide support to affected site for restoration
- 0 Implement account authorization program and validate its usage through technical and procedural controls
- 0 Implement and monitor a security patch management program for tracking, evaluating, testing and installing applicable cyber security patches for all critical sites in the region

- θ Implement and support the backup and restoration program and incident response for the critical sites in the region. Support and maintain anti-malware software at all critical sites
- θ Work with vendors to ensure solutions deployed are compliant to regulation and in alignment with corporate standards
- θ Participate and coordinate with all relevant SMEs in computer or network related design discussions at each facility to ensure alignment with corporate standards and compliance
- θ Act as lead subject matter expert in providing guidance with regard to changes in cyber security measures as a result of change in technology, regulations or expansion in the region as a result of acquisition, upgrades or repowering efforts
- θ Identify new items for cyber security improvements including budget development at the affected critical sites
- θ Review site diagrams and topology drawings to ensure accurate depiction of systems Coordinate audit and RSAW preparation with the various SMEs and participate as lead manager during audit
- θ Report progress on cyber security efforts to facility management and integrate activities with the site CIP specialist
- θ Identify areas for improvement and provide input for cyber security efforts
- θ Supervise and develop staff toward personal development including the timely completion of performance reviews that provides honest feedback in areas of strengths and weaknesses
- θ Engage in cyber vulnerability assessment activity and work with site CIP Specialist in developing and tracking a corrective action plan through remediation.

Qualifications:

- θ Demonstrated analytical and problem solving skills.
- θ Working knowledge of basic security and networking concepts including: LAN/WAN, firewalls, routers and switches, VPN, encryption, IDS/IPS sensors.
- θ Knowledge and identification of network infrastructure threats or virus, intrusion containment and mitigation techniques.
- θ Knowledge of third party security tools including Anti Virus (Trend Micro, Symantec, etc.).
- θ Experience working on, and implementing changes on large networks.
- θ Demonstrated ability to communicate effectively with all levels of internal and external customers. Demonstrated presentation skills; demonstrated planning and organizing skills.
- θ Demonstrated ability to work independently and as a team member.
- θ Demonstrated ability to set priorities and to respond to changing demands from multiple sources.
- θ Ability to exercise discretion and independent judgment in applying established techniques, procedures or standards; demonstrated ability to maintain confidentiality.
